

# *Our future*

## *Epsom and St Helier*

### *2020 - 2030*

## *Record investments*

---

We are spending record amounts in critical infrastructure backlog circa £80 million

## *2020 onwards*

---

We have committed to keeping all of acute services on both our sites until 2020

There are 3 significant issues to resolve to secure delivery of acute services into the future

- Our buildings  
(latest data shows over 80% are not deemed suitable for delivery of modern healthcare)
- Clinical sustainability
- Financial sustainability

2020-2030 vision

# Epsom and St Helier University Hospitals NHS Trust

85% of patients would see no change.

If you came to our hospitals for an outpatient appointment, our consultant could see all of the medical records that your GP has access to.

We think the following services will always be provided on both our hospital sites.

**Urgent and emergency care** – emergency care centre open 24 hours a day with specialist medical support, taking adult and child walk-ins.

**Elderly care services** – including certain emergency admissions, frailty services, inpatient beds and a centre of excellence for rehabilitation.

**Ante natal and post-natal care** – clinics for pregnant women and new mothers.

**Outpatients and diagnostics** – outpatient clinics (including the recently opened eye units), endoscopy and radiology (including plain film radiography, CT and MRI scans).

**Integrated care** – this could include GP services, learning disability services, day centres, community centres and a children's centre.

**Elective procedures** – non-complex elective surgery (not needing critical-care support) and the eye units. In every scenario we are looking at, the hip and knee joint replacement centre (SWLEOC) staying at Epsom Hospital.

## Specialist Acute Services

Caring for our sickest patients and those most at-risk – 15% of our patients

Inpatient paediatrics (the small number of children who need to stay in hospital overnight)

Major A&E (patients who are acutely unwell needing complex clinical assessment and procedures like resuscitation)

Critical care (the highest dependence care a hospital can offer patients)

Babies born in hospital

Complex emergency medicine (patients who need services like high-dependency care and coronary care)

Emergency surgery and trauma

## *In summary*

---

- In every scenario 85% of our patients will continue to receive care as they do now from their local hospital
- We need to get the funding for a new acute hospital facility from 2020, which will care for and treat our sickest and most at-risk patients:
  - Major A&E
  - Inpatient paediatrics
  - Babies born in hospital
  - Complex emergency medicine

## *In summary*

---

- We want to keep this facility on one of our three hospital sites
- We are at an early stage of a lengthy process which will take several years - we genuinely want to know what you think
- It strengthens our case if local people support our vision to keep services locally and our mission to secure a new hospital facility to treat our sickest and most at-risk patients

## *What we are asking in the engagement phase*

---

Do you agree with our aim to provide as much care as possible from our existing hospital sites at St Helier and Epsom and do this by working more closely with the other local health and care providers?

Do you think we have made the case that we will improve patient care by bringing together our services for our sickest or most at-risk patients on a new specialist acute facility on one site?

## *What we are asking in the engagement phase*

---

- We have set out several scenarios on how we can do this. Do you think we should consider any other scenarios?
- How would you like to be involved in these discussions in the future?
- Is there anything else you would like to tell us?

## *The process*

---

- Engagement - end of Sept
- Analyse and complete Strategic Outline Case – this year
- NHS decision-making
- Public consultation on preferred solution expected autumn 2018
- New specialist acute facility opens 2024
