Agenda Item 8

Committee: Cabinet

Date: 15 January 2023

Wards: All

Subject: Civic Centre - Installation services and project managment of a Variable

Refrigerant Flow (VRF) System, Electrical Intake and Replacement Lighting

Lead officer: Lucy Owen, Executive Director of Housing and Sustainable Development

Lead member: Councillor Andrew Judge, Cabinet Member for Housing and

Sustainable Development

Contact officer: Nick Layton, Interim Head of Facilities Management

Exempt or confidential report

The following paragraph of Part 4b Section 10 of the constitution applies in respect of information within the appendices and it is therefore exempt from publication:

Information relating to the financial or business affairs of any particular person (including the Authority holding that information).

Members and officers are advised not to disclose the contents of the appendices.

Recommendations:

- A To approve that pre-construction negotiations are concluded into for the provision of a new VRF system at the Civic Centre, along with remedial works to the electrical power network and partial lighting replacement, with the preferred bidder listed in Appendix A.
- B To request authority be delegated to the Executive Director of Housing and Sustainable Development to exercise, in consultation with the Cabinet Member for Housing and Sustainable Development, approval to award a contract to the preferred bidder on completion of a successful value engineering exercise to bring costs within budget.

1 PURPOSE OF REPORT AND EXECUTIVE SUMMARY

- 1.1 The purpose of this report is to explain the procurement process for the proposed replacement heating system at the Civic Centre, together with remedial works to the electrical power supply and lighting replacement over a number of floors, and to recommend that Cabinet approves that pre-construction negotiations are entered into with the preferred bidder contained within Appendix A.
- 1.2 A tender was undertaken, with contractors bidding through the Pagabo Framework, fully in line with CSOs and the Public Contract Regulations 2015.
- 1.3 The stage one element consisted of contractors replying to a set of quality questions along with tendered percentage rates for preliminaries and overheads and profit. From this exercise a preferred bidder has been identified.
- 1.4 Stage one also asked contractors to estimate the price of delivery of the works so that costs could be assessed with a fair amount of accuracy prior to contract award. These prices are non-binding and will be the subject of the proposed value engineering exercise.

- 1.5 Stage two consists of engaging with the preferred bidder to undertake a value engineering exercise to bring costs within budget and discuss further the programming and sequencing of the proposed works.
- 1.6 A total of 6 contractors submitted compliant bids. The contractor deemed to offer the Council the most economically advantageous tender at stage one is proposed to be engaged as preferred bidder. Due to the commercial sensitivity the details of the assessment results have been circulated as a confidential appendix to this report.

2 DETAILS

- 2.1 The gas boilers at the Civic Centre are 42 years old and well past their estimated life span.
- 2.2 A consultant was engaged during late 2020 to carry out a feasibility study regarding the most appropriate replacement option bearing in mind Merton's climate emergency declaration and its wish to move away from gas as a means of heating its buildings.
- 2.3 It was concluded that the best option, in terms of reduction in carbon emissions and flexibility in use was the abandonment of the gas fired boilers and replacement with a Variable Refrigerant Flow (VRF) system. This will enable heating in the winter and comfort cooling in the summer. Computer simulation indicated there will be little impact in terms of carbon emissions in having cooling in the summer where there is currently none.
- 2.4 In 21/22 the Council was successful in obtaining a £3,136,593 grant under the government's decarbonisation programme to replace the boilers with a VRF system. A condition of the grant is that the Council provides the funds equivalent to the like for like replacement of the gas boilers, equating to £1,061,982.
- 2.5 A building services consultant, Butler & Young, was engaged following an open tender exercise in early 2023 to design the new system and act as project manager for the works.
- 2.6 This procurement will provide a contractor to install the designed system to the required specification within the timeframe of the grant funding.
- 2.7 Further work identified to tie into this project, but funded via separate funding streams are:
 - replacing the current T5 lighting system with a modern LED system across a number of floors of the Civic
 - upgrading the aging electrical switchgear and provision of a new substation for the increase in electrical power required to run the VRF system.
- 2.8 The current electrical switchgear is aged and requires replacement and funds have been set aside for this work in 23/24 and 24/25. Due to the amount of electrical works associated with the new VRF system, these works are best undertaken at the same time. It will likely mean the power to the Civic will need to be turned off while UKPNs new supply is energised. This shutdown

- will be kept to a minimum, with exact details developed with UKPNs, B&Y and the successful contractor.
- 2.9 There is the possibility of road closures associated with the delivery of the works; for the new electrical supply into the Civic and for cranage of redundant plant from the 2nd floor roof, although it may be possible to use the car park for the latter. Any road or lane closures will be agreed with TfL.

3 ALTERNATIVE OPTIONS

- 3.1 The consultant engaged during 20/21 to carry out a feasibility considered the following options:
 - Replacement with high efficiency gas boilers
 - Replacement with a combination of high efficiency gas boilers and heat pumps
 - Replacement with heat pumps
 - Variable refrigerant flow air conditioning system (VRF)

The table below summarises the findings of the feasibility study in terms of carbon emissions:

Option	MWh/yr	kgCO₂/yr	Reduction kgCO ₂ /yr compared to existing
Current boilers	3,645	765,442	Base
Condensing boilers	2,622	550,674	28%
Air source heat pump + boilers (50:50)	1,197	271,265	65%
Air source heat pump plus new heating distribution	996	232,044	70%
VRF	539	125,480	84%

- 3.2 It was concluded that the best option, in terms of reduction in carbon emissions and flexibility in use was the abandonment of the gas fired boilers and replacement with VRF.
- 3.3 The proposed VRF system uses electricity as a primary fuel rather than gas and as such there will be changes to the utility costs associated with the new scheme. These are as estimated below based on current utility costs of 7p/kWh for gas and 25p/kWh for electricity. These figures can change, up or down depending on the utility market.

	Current fuel displacement (kWh)	Current estimated cost (£)	Estimated consumption with VRF	Estimated costs using VRF
Heating	1,750,000	£122,500	575,800	143,950
Hot Water	255,252	17,868	150,000	37,500
Total		140,368		181,450

4 CONSULTATION UNDERTAKEN OR PROPOSED

- 4.1 The approach outlined and followed for this procurement was initially conveyed at the Departmental Procurement Group (DPG) on 25 October 2023.
- 4.2 Legal Services and Finance have been consulted and their comments will be incorporated in the final report.

5 TIMETABLE

Event	Date
Deadline for receipt of tenders	7 December 2023
Evaluation of tenders	7 December – 13 December 2023
Procurement Board (virtual approval request)	21 November 2023
Leadership Group	XX January 2024
Cabinet	15 January 2024
Call-in period	15 January – 19 January 2024
Notification of award decision	20 January 2024
"Standstill" period	20 – 30 January 2024
Confirm decision to move to Stage 2	30 January 2024
Contract commencement date	February 2024

6 FINANCIAL, RESOURCE AND PROPERTY IMPLICATIONS

- 6.1. A credit check was carried out. Please refer to Appendix C.
- 6.2. The approved capital programme includes £4,903,080 for the delivery of this scheme. The price section was evaluated on % overhead & profit and prelims and is circa £3m higher than this budget.
- 6.3. Officers intend to use value engineering to reduce the estimated cost of the scheme much closer to the approved budget
- 6.4. The scheme is funded by £3.136m Salix grant, in order to retain this grant £1.1m of the scheme needs to be spent by 31 March 2024.

7 LEGAL AND STATUTORY IMPLICATIONS

- 7.1. The award of contract to the approved provider follows a successful tender which is compliant with the process in accordance with Regulation 33 of the Public Contracts Regulations 2015 (PCR) and the Councils Contract Standing Orders.
- 7.2. Officers should retain evidence of the competition process undertaken in order to demonstrate compliance with the framework agreement.
- 7.3. Once the call-off contract has been entered into it will need to be recorded on the Council's contract register and the relevant information required by the PCR should be published on Contracts Finder.
- 7.4. The Council is entitled to delegate the decision making as described in the recommendations under section 9E of the Local Government Act 2000.

8 HUMAN RIGHTS, EQUALITIES AND COMMUNITY COHESION IMPLICATIONS

- 8.1 The successful supplier must, in carrying out its functions, have due regard to the need to eliminate unlawful discrimination and harassment and to promote equality of opportunity in relation to disability, race and gender and the need to take steps to take account of disabilities, even where that involves treating the disabled more favourably than others (section 13(3) Equality Act 2010).
- 8.2 Within the tender, bidders were required to propose social value offers via the Councils Social Value charter, under 4 specific theme areas: Economy; Social; Environmental, and; Innovation. The social value offer submitted by the proposed contactor will potentially generate social value to the London Borough of Merton. The value of which can be found within Appendix D. 5% of this will be specifically for 'Environmental' measures to support the Councils Climate Emergency declaration and efforts to become Carbon neutral.
- 8.3 The recommended preferred bidder employs skilled staff who will be paid above the London Living Wage

9 CRIME AND DISORDER IMPLICATIONS

9.1. There are no crime and disorder implications relating to the subject of this report.

10 RISK MANAGEMENT AND HEALTH AND SAFETY IMPLICATIONS

- Only when the London Borough of Merton enters into legally binding contracts under the terms of the contracts will the contracts come into force.
- The preferred bidder has successfully completed satisfactory financial checks as well as checks on competency in delivery of similar contracts at the prequalification and tender stage of the procurement exercise.

- 10.3 A risk (Early Warning) register will be produced in line with the proposed contract and will be used by all parties throughout the contract to manage risk.
- The contract falls under the Construction (Design and Management)
 Regulations 2015 to ensure health and safety is considered during all stages
 of the contract by all the parties involved. The Consultant B&Y has been
 appointed as Principal Designer under the regulations and the preferred
 bidder, on award of any contact, will be appointed as Principal Contractor.

11 ENVIRONMENTAL AND CLIMATE IMPLICATIONS

- 11.1 Merton Council approved the Climate Strategy and Action Plan on 18 November 2020 which commits the council to achieve net-zero carbon across four thematic areas (the Green Economy, Buildings and Energy, Transport and Greening Merton by 2030).
- 11.2 Replacing the boiler plant with a VRF system can play a significant part in reducing the council's reliance on natural gas and it is estimated a reduction in emissions from the Civic Centre boilers by 84% compared to current values will offset circa 640 tonnes of CO₂ per annum.
- 11.3 The reduction in carbon emissions by changing T5's to LEDs is estimated at circa 5.6 tonnes of CO₂ per annum, eventually increasing to 14 tonnes once all lights have been replaced.

12 APPENDICES – THE FOLLOWING DOCUMENTS ARE TO BE PUBLISHED WITH THIS REPORT AND FORM PART OF THE REPORT

- Appendix A Details of Price / Quality Analysis
- Appendix B Credit Check
- Appendix C Social Value Commitments

13 BACKGROUND PAPERS

13.1. None
